

No One Method For Cleaning Carpets

There is no one method for cleaning carpets or fabric as different material & dyes require different techniques & methods. Cleaning of Persian ,Oriental rugs in wool, silk, & cottonrugs requires skills & experience in the removal of stains & colour from your carpet.

Cleaning a Persian carpet

Have your rug cleaned only by an expert or professional when it really needs it. For rugs in some areas this will mean a yearly cleaning. Rugs in other areas can go several years and more without needing professional cleaning.Persian carpets have been an integral part of Persian culture and society since at least 500 BC. These carpets are a beautiful addition to a home and also an excellent investment. Proper care of these carpets is imperative to keep it in its best condition. **Cleaning a Persian carpet is an process that requires effort. It is a small price for having your Persian carpet last for years to come** Often times, Persian rugs are bought not only as a decoration but as an investment. The rugs are typically intended to last for many years. Keeping the rug clean ensures its durability. **Unlike their cheaper counterparts, these rugs cannot be shampooed along with the other furniture items in the room.**

Carpets can benefit the health and safety of occupants

as it is not a stylstic choice but acts as a clearing agent , acts as a allergan trap against common dust & pollutants as they get stuck & stay stuck to the fibers untill its vacuum . The other health benifits are that it protects against the cold flooring reducing arthrittis & protectin your bones .In a goverment study in Sweden , when carpeting was banned from public buildings & was replaced by smooth flooring the outcome was the allergic reactions increased in the smooth surface building & decreased in building where carpeting was used resulting in lifting of the ban.

Carpet provides actual thermal resistance & also provides a comfortable place , it is ideal for cushioning our footsteps, reducing slips and falls and minimizing injuries , helps absorb sounds & adding a cushion pad or underlay beneath your carpet reduces noise even further.

Threaded floor loom-woven wall to wall carpet & carpet tile floor covering is chosen by many for their home or offices over wood ,marble & tile floors as there are many benefits to carpeting as it insulate against the cold, add safety, absorb sound, and cushion the feet, but it can design & complete the area it is layed on . Wall to wall carpets come in a very large different quality , styes , material , patterns & texture for different part of uses & traffic which also lend an air of sophistication.

A cut-pile carpet features cut loops and is one of the most popular carpet constructions available. There are several types of cut-pile carpets, including plush/velvet, which has a smooth, level surface, Saxony, which has a smooth surface but more twist to the yarns to create a less formal look, and frieze, which is a cut pile featuring very twisted yarns, creating a "curly" texture. Level loop piles are loops that are not cut, but are the same height, creating an informal look. An example of this is Berber carpet. Multi-level loop pile has several different loop heights to create texture and patterns. Cut and loop pile is a combination of the two and provides the most amount of texture.

When pricing carpets, it is best to consider how long it will be used as in general, a higher grade of carpet will last much longer than one of lower grade & in the long run it might cost less. Fibers are an important part of carpet construction and may be nylon, olefin, polyester, acrylic, wool, or blends of the above. Nylon is the most popular carpet fiber, while olefin provides resistance to wear and stains. Wool tends to be the most expensive

Kilims & Durries Cleaning

is a very special skill as you have to clean both side & prevent dirt from going from one side to the other .Basically this kilims have to be hung upright for cleaning & it has to be clamped to ensure that it doesn't loose its shape

are flat tapestry-woven carpets or rugs Kilims can be purely decorative or can function as prayer rugs. Kilims are produced by tightly interweaving the warp and weft strands of the weave to produce a flat surface with no pile. Kilim weaves are tapestry weaves, technically weft-faced plain weaves, that is, the horizontal weft strands are pulled tightly downward so that they hide the vertical warp strands.

Dry cleaning is any cleaning process using a chemical solvent other than water. The solvent used is typically tetrachloroethylene, It is used to clean delicate fabrics that cannot withstand the rough. By the mid-1930s, the dry cleaning industry had adopted It has excellent cleaning power and is stable, nonflammable, and gentle to most garments

Hydrocarbon cleaning is most like standard dry cleaning but the processes use hydrocarbon solvents such as Exxon-Mobil's DF-2000 or Chevron Phillips. These petroleum-based solvents are less aggressive than perc and require a longer cleaning cycle. While flammable, these solvents do not present a high risk of fire or explosion when used properly

Wet cleaning is a system that uses water and biodegradable soap. controlled dryers and stretching machines ensure that the fabric retains its natural size and shape. Wet cleaning is claimed to clean a majority of "dry clean only" garments safely, including leather, suede, most tailored woolens, silk, and rayon. Most cleaners use wet cleaning on some garments

Our Hand Washing Of Carpets

Color Enhancement, Stain, Grime Removal, Eradicate Bacteria, Dust Mites, Pile Brushing Stretching, Fringes Whitening, Remove Bad Odour, Sun Drying. Colour run can lead up to structural damages and rug repair & it can be caused by many mishaps causing major damage to valuable rugs and requires the service of experts. Color run in simple term is when the darker colors of a rug bleeds into the lighter areas and cause damage. This happens when the rug is wet or exposed to moisture, water, pets urine etc. Persian, antique & silks rugs are a work of art & knowing the origin, material, dye & age of each rug in such great skill. Every rug takes a special unique process to remove the color run & restore it to its original condition. It is a very lengthy process undertaken by only professional who have a understanding of the process

Rug and Carpet Guard is the finest rug and carpet protection available in the world today has been developed to protect rugs and carpets, against soiling and the penetration of water and oil-based stains. The product can also be used on all types of fabrics, including suede and leather. Treats and protects rugs and carpets including oriental rugs and fine fabrics from oil and water-based stains. Will not change the colour, look, or feel of the treated material. Is not water-based, so it will not affect dyes and will not cause fabric shrinkage.

Duralay underlay manufactured in UK has been manufacturing hard wearing carpet underlays for over 60 years. They are well known for their extremely tough and durable crumb rubber underlays. Manufactured from car-tyers, Duralay underlays are an ideal environmentally friendly flooring solution. There are a number of settings throughout the home and in other commercial and contract settings where a very hard-wearing carpet underlay is required due to heavy objects or heavy traffic over a particular area. Duralay underlay caters specifically for these situations with its range of impregnable underlay including Duralay carpet underlay is well known around the world for being hard wearing and durable. Their crumb rubber underlays are as tough as they come which is why they are so popular with house builders and major hotel groups. Buying a Duralay underlay will give you peace of mind that your carpet will last for its full lifetime. The vapour stop barrier also protects against moisture seeping through, is much more effective than polythene sheeting, plus can be used with underfloor heating. So, if you want premium quality, hard wearing, durable, quality and noise reduction use Duralay

For Food spills/Pet urine & stool, regurgitation

Of the most common spills, urine presents the most severe problem. It can cause severe color run in the rug, and the odor can be very hard to remove or disguise. Urine can also chemically damage the structure of a rug by making the foundation hard and less supple, and the presence of urine in a rug can help attract moths. Repeated wettings can cause the foundation of the rug to lose mechanical strength to the point where the rug cracks and breaks when rolled or folded. In case of a food spill or urine on a rug, the problem is much more easily handled if the spot is treated promptly, before the spill is allowed to dry. Blot up as much liquid as possible with paper towels or a clean, white cloth. Try to rinse out as much of the spill as possible & call the experts immediately. If a pet regurgitates on a rug, you are faced with removing a complex mixture of foodstuffs, saliva, and stomach acids. Depending on the foods involved, this mixture can actually work as a dilute dye to stain the pile a different hue. If a pet regurgitates or defecates on a rug, clean the area immediately by picking up as much material as possible with paper towels or with a clean, white cloth. If necessary, use a tablespoon to scrape up all the foreign material. Blot the area dry and immediately. Don't scrub hard--too much manipulation of the pile can spread the stain. Sponge in the direction of the nap.
