

Wall to wall & carpet tiles, are carpets intended to cover a floor entirely. Carpet over 4 meters in length is usually installed with the use of a "power stretcher" (tubed or tubeless). Fitted carpets were originally woven to the dimensions of the specific area they were covering. They were later made in smaller strips, around the time stair carpet became popular, and woven at the site of the job by the carpet fitter. These carpets were then held in place with individually nailed tacks driven through the carpet around the perimeter and occasionally small rings in the carpet which were folded over. The introduction of "smoot hedge" also known as "tack strip", "tackless strip", or "gripper strip" simplified the installation of wall-to-wall carpeting, increasing the neatness of the finish at the wall. Because gripper strips are essentially the same thickness as underlay, using gripper strips yields a level edge, whereas tacking gives an uneven edge.

Gripper strip is a strip of wood beveled on one edge with many small tacks protruding through from the bottom. It is placed around the perimeter of the area to be carpeted, with the beveled edge side nearest the wall and held in place with nails (timber floors) or glue (concrete floor). The carpet fits over it (held on the tacks) and is wedged into the narrow gully left between the wall and Bellevue side giving a smooth edge. Gripper strips allow stretching of the carpet during installation, greatly improving the appearance of the installation. Stretching can be performed with the use of a power stretcher or a manual knee-kicker. Gluing without underlay or gripper is simpler as the carpet is cut to the wall by the fitter and glued underneath.

Wall to wall We offer the finest collection of carpets for residential requirements. Wall to wall & sofa steam cleaning

Wall to wall carpets & upholstery cleaning services is all about the experiences that has come from years on the job, the right kind of equipment's & chemicals used. All furnitures & carpets are not the same and, therefore, not all furniture can be cleaned in the same manner as this is divided into many sectors such as, quality of material, dyes,

texture & finishing of the said item .

It is harder to notice the oily built up on your carpet fibers & fabric over time. Nature , daily use ,outdoor footwear, air pollution, cooking and other vapors takes its toll on fibers & fabric which results in stains , soiling , oil marks & discoloration .

This is a job that is best left to the experts who are familiar with the right chemicals , equipments & are trained to carry out such task . The method might look as easy as ABC but it is definitely not & there have been many cases that the carpet or upholsterer has been completely ruined by do it your self task . The experts who visit your home or office will preform the steam cleaning with care using the safest chemical needed to carry out the cleaning process known as a hot water extraction system, passes over a moist, shampooed carpet o sofa in order to remove deep rooted dirt particles. The hot water extraction system emits no steam but provides deep cleaning that takes place in homes , offices or on site.

The professional will use a very powerful vacuum to remove dirt that is on the fabric & then use hot water extraction methods & spray your item with water chemical solutions & detergent getting your fabric soaked & allowing loosening of dirt after which they will scrub the surface with a very powerful steam vacuum loosening all dirt & oil from the fabric .At the same time the vacuum will be sucking in the excess water from the carpet or sofa . This process is manually done & a deep understanding of the right chemical , water & pressure is very important . There are some cases where manual scrubbing is also require to removed certain stains or oil patch which have been left for too long & have changed the colour of the fabric .

Steam cleaning or deep cleaning is very affordable & should be done once every 12 to 18 months , as this will help in keeping your items clean , which translates to better hygiene & health that looks & feel great which is appreciated by everyone . The benefits of steam cleaning are the extremely hot steam produced by the steam cleaner sanitizes germ-laden surfaces ,can kill bacteria, viruses, molds and pests . The Office of Environmental, Health, and Safety Management recommends steam cleaning for bed bug infestations.
